Stakeholders

Stakeholder	Role	Needs and Expectations	Level of Influence
Language Learners	Primary users of the application	Personalized lessons, realistic conversations, vocabulary tracking, progress monitoring, and offline access to saved lessons	High
Development Team	Designs, develops, tests, and maintains the application	Clear requirements, maintainable code, effective collaboration, and suitable development tools	High
AI Service Provider	Provides the AI capabilities used to generate conversations and learning content	Valid API requests, secure integration, and compliance with service limitations and usage policies	Medium
Firebase Service Provider	Supports authentication and cloud data storage, if included in the implementation	Proper service configuration, secure access rules, and compliance with platform requirements	Medium

Non-Functional Requirements

NFR-01: Performance

The application should provide responsive navigation and minimize unnecessary delays when loading lessons and displaying saved content.

NFR-02: Reliability

The application shall handle network failures and AI service errors without unexpectedly terminating the application.

NFR-03: Security

Sensitive information shall be handled securely. API credentials shall not be embedded directly in the client application, and access to user data shall be appropriately restricted.

NFR-04: Usability

The interface shall be clear, consistent, and easy to navigate for users with different levels of language proficiency.

NFR-05: Maintainability

The application shall use modular code organization, separation of concerns, and appropriate software design principles.

NFR-06: Offline Availability

Previously saved lessons shall remain accessible when the device has no internet connection.

NFR-07: Compatibility

The application shall support the Android versions selected as project targets and tested by the development team.

NFR-08: Scalability

The application architecture should support adding new scenarios, lesson types, and target languages without requiring major changes to existing components.

NFR-09: Data Privacy

The application shall collect only the information necessary for its learning features and shall handle personal data according to applicable privacy requirements.
